Abstract	AB	[EN]

**PROBLEM TO BE SOLVED:** To provide a system for automating Internet connection setting when installing a network home electrical appliance and for confirming information which is automatically set in the network home electrical appliance.

**SOLUTION:** A simple connection server is prestored with user recognition information such as an identification number of a home being object of installation of the network home electrical appliance (specification of terminal unit) or serial ID (terminal ID) of the network home electrical appliance, connection information of an Internet service provider, which corresponds to the user recognition information, a representative name and an address of the home being object of installation or the like, and a mail address of an installation operator (or network home electrical appliance installation entrepreneur). Communication setting information such as an access point for

connection to the simple connection server is stored in the network home electrical appliance. The network home electrical appliance receives ISP connection information after it is connected to the simple connection server, and it is automatically connected to the Internet. Setting information is displayed to the network home electrical appliance and a mail comprising a setting content is distributed to the installation operator.
